RCH Pre-Construction Newsletter

Wow what a heat wave last month! Luckily we all pulled through and we're excited to show you some of our finds. From your kitchen to your bathroom to your convenience we have it all in this month's newsletter.

## Nevin's Picks

With the pandemic hopefully on the decline, many people have thought more about how to keep their houses clean from not just dust and mold, but also bacteria and viruses. Last month I featured a light bulb that also worked as a UV light to kill bacteria and viruses. This month I found a cousin to that light bulb, a bath fan with a UV light! We care about our clients safety, not just during their project but also years after we've finished. This is one of those things that will continue to give you value long after your project is done. Check it out! <https://broan-nutone.com/en-us/home/learn/taylor-morrison-partners-with-broan-nutone>

How would you like to create fresh water out of thin air? Especially after last month's heat wave. With the help of Watergen, you can! "Watergen's patented technology creates high quality drinking water out of air for people everywhere." This innovative technology makes the water from the humidity in the air. They are working to help bring fresh water to people all around the world who don't have proper access to it. You can have the benefit of helping support them and bring this technology into your home. Check out the Genny model:

## Jason's Picks

Functionality is everything, especially in your kitchen. When we are designing a kitchen we always have to think about the work triangle. This is a triangle between the sink, refrigerator, and stove. Most times the actual work station can get over looked. But what if you could put your work station in your sink? Well now you can! Check out this picture and website to see some amazing pictures to learn more about Ruvati's Dual Tier Workstation. Ruvati also carries many types of sinks and workstations. <https://www.ruvati.com/>

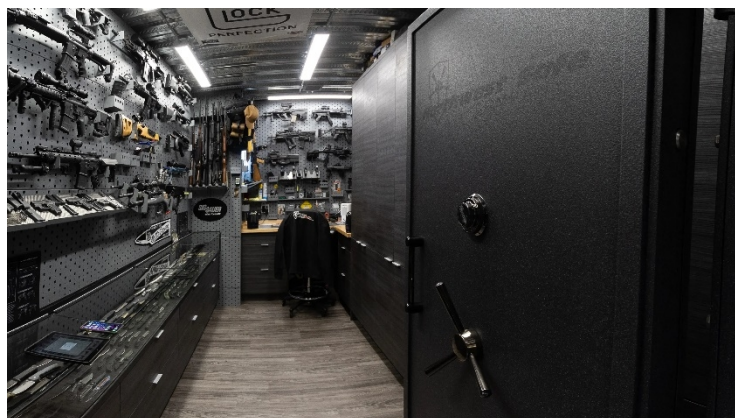

Another part of the work triangle is the stove. Why not get the best of the best? Viking ranges make a great companion to the Ruvati Workstations. With everything from your typical 30" wide to 66" wide with gas, dual fuel, electric, and induction options, you're sure to find something that will fit your kitchen. Viking also has cooktops, ovens, microwaves, warming drawers, and even refrigerators. I'm sure you'll have as much fun surfing through their website as I did. Check it out: <https://www.vikingrange.com/consumer/index.jsp>

## **Build Methodology**

Safe rooms and elevators. Sounds pretty commercial right? Well lucky for you, more commercial products are coming into residential construction every day. We have talked about elevators and safe rooms with several of our clients. Though they might not always be right for your home, you'd be surprised with how helpful and universal they can be. Take a look at these and let us know if you would like to know more.

Also a brand new, very efficient way of heating your home has come across our desk. If you are at a stage where you are thinking about how you want to heat or cool your home, then check out this waterless geothermal system. This is probably the most cost efficient product on the market today. [www.waterlessgeothermal.com](http://www.waterlessgeothermal.com)

**Stay tuned for more!**
